AfCS Solution Protocol

Reagent name: Lentivirally transduced RAW 264.7 growth medium with 100 µg/ml Zeocin

Reagent name abbreviation: LVRGM100Z

Protocol ID: PS00000670

Version: 01

Volume: 500 ml

Components:

Preparation:
1. Note: serum is not heat inactivated, in contrast to RAWGM1 (PS00000510).
2. Pour 250 ml of DMEM into the top chamber of a 0.2-µm 1-L Nalgene SFCA filter unit set up in a laminar-flow hood (use gradations on chamber to estimate volume).
3. Add non-medium components with a pipette.
4. Bring solution in top chamber to final volume with DMEM.
5. Cover chamber with supplied lid and apply suction to filter.
6. Remove filter compartment and cap bottle. Swirl to mix.

Storage:
- Temperature: 4 °C
- Location: __________________
- Aliquot size: NA
- Special instructions: None

Comments: Macrophages are extremely sensitive to lipopolysaccharide (LPS) endotoxin from Gram-negative bacteria. All solutions, buffers, and media should be made with sterile, tissue-culture grade, endotoxin-tested water. To limit potential LPS contamination, use disposable sterile plastic rather than laboratory glassware.
